FPT Connections REMARKS: Connection End C

- Coils will vent and drain through factory-installed vent and drai fittings when mounted level for horizontal flow.
- 2. If S < 1" or End Plates Only Case, vents and drains will be located on the side of the header. Connection locations other than standard could affect vent and drain locations. Consult factory.
- Mounting holes are optional. 0.375" diameter holes on 6" centers from the centerline of the fin height and finned length are typical for all flanges. Not available with Inverted Flanges or when S<0.75".
- 4. All dimensions are in inches.
- 5. Type K coils have removable plugs on both ends.

- Type Q coils have removable plugs on opposite connection end only.
- 8. With Inverted Flanges or End Plates Only construction, headers will extend a maximum of 0.375" above and below the casing. Vents and drains will be located on the side of the headers.
- Intermediate tube supports are fabricated from heavy gauge stock and supplied per the chart below.

Finned Length (FL)	<u><</u> 48	> 48 <u><</u> 96	> 96 <u><</u> 144	> 144
