

Modine's Modu-Coil® Design

When the bite is too big to chew, take smaller bites!

- *Column or support in the way? You need a **Modu-Coil***
- *Can't get a crane or hoist into the area to lift into place? You need a **Modu-Coil***
- *Can't get the replacement coil in the elevator? You need a **Modu-Coil***
- *Hallway too narrow to make a tight turn? You need a **Modu-Coil***
- *Door too small to fit the coil through? You need a **Modu-Coil***
- *Need a crane just to get the replacement coil on the roof? You need a **Modu-Coil***

Modine's Modu-Coil® (modular coil) design provides an engineered solution for replacement applications where dimensional constraints and on-site obstructions do not always allow easy, conventional drop-in installations.

Modu-Coil is a fluid coil built in two or more separate sections, simplifying transportation and handling in installations where tight spaces are prevalent. The modular design limits the time and renovation costs of standard coil replacements. It also eliminates any sacrifice of performance, as the coil will operate the same as a one piece solution once the sections are properly assembled on site. Make your difficult installations easier and less costly. You need a **Modu-Coil!**
